

Manual Installation

1. Extract the zip to your server
2. then look at config.php file

```
1  <?php
2  define('xINSTALLED', true);
3
4  $sql_details = array(
5      'host' => 'localhost',
6      'db' => '',
7      'user' => '',
8      'pass' => '',
9      'port' => '3306'
10 );
```

change xINSTALLED => INSTALLED 09:33

Configure your database, 09:33

3. Configure the root directory of the project

```
54  * ----- Today
55  *
56  * This is usefull when you will host the app inside a subdirectory of root
57  */
58  define('SUBDIRECTORY', 'modernpos');
59
60
61  /*
```

This line if you run without /modernpos remove them

http://localhost/moderpos <== without remove them
http://localhost/ <= remove them

```
/*
 * If you use FTP for filemanger then just left it as blank
 * Example: http://modernpos/storage directory
 */
define('FILEMANAGERURL', 'http://localhost/modernpos/storage/products');
/*
 * -----
 * ENABLE/DISABLE HOOKING SYSTEM
 * -----
 */
```

This line, too. 09:34

4. Create the database named 'mypos' and import the database(mypos.sql)

5. Browse the URL (eg www.yourwebsite.com/modernpos)

6. Login credentials

Username: admin@gmail.com

Password : 123456

7.Done
